

CASE STUDY

EXTENSION & RENOVATION

HOUSE RENOVATION AND EXTENSION

Mr and Mrs Coulston had their house extended and fully renovated by BG Construction. The side extension allowed for a new open-plan kitchen-diner with large living room and a new master bedroom suite, complete with walk-in wardrobes and designer ensuite. The front extension, above an existing downstairs room, increased the number of bedrooms to five.

A start-of-the-art Lightwave lighting system and Nest Thermostat were installed. Other internal works included: kitchen installation, new bathrooms, underfloor heating (to the downstairs and bathrooms), plumbing, electrics, window replacements and decorations. External works included: a new driveway and patio.

"We initially met with five developers. Upon meeting BG Construction and after visiting one of their previous projects, we felt they were the right people to help us, as we saw the attention to detail on their previous jobs and heard directly from other customers how nice the team was to work with.

The project ran smoothly, always on time. In fact, everyone turned up so punctually we could have set our watches by them. We knew exactly what was going on at every stage, as the project manager was on site every single day. The whole team massively exceeded our expectations.

We heard from our architect that picking a construction company is sometimes demonstrated by a triangle illustration, with time, cost and quality in each corner. He said that you normally would expect one element to be lower than the others, but BG Construction offer the perfect triangle—with no compromising on any elements of the job.

We would highly recommend their services to all. They've delivered above what we asked for, on time, for a fair price, and the works were completed to exceptionally high standards."
